Exterior Sign System
Exterior signs promote a consistent Yale identity and help to ensure a positive first impression of the University.
INTRODUCTION

SIGN APPROVAL & ORDER PROCESS

All exterior signs at Yale are managed by the Yale sign committee, made up of representatives from the Office of Facilities and the Office of the University Printer. All requests for exterior signs, including signs for new facilities, must be reviewed by that committee. To initiate the review process, please fill out the online request form. Requestors will be notified of the committee’s decision and, if the sign is approved, of the estimated schedule for fabrication and installation.

Design and typesetting of all exterior signs is by the Office of the University Printer, which maintains templates for all sign types and also oversees or consults on fabrication, siting, and installation based on the guidelines outlined in this manual.

The University Printer also reviews interior sign project files to ensure that they conform to University standards (see Appendix A, pp. 63-67).

Note Nonconforming or unapproved exterior signs (including paper signs) are prohibited, and under no circumstances may any exterior sign be independently ordered and installed.

SIGN MESSAGES

To ensure consistency and legibility, exterior sign messages have been standardized. Buildings are identified by name and/or address alone, not by the departments or offices within. See Itemization, pp. 26-43, for details.

HISTORY

In 1994 a committee charged by then President Richard Levin and chaired by David Pease, then Dean of the School of Art, recommended that a comprehensive building identification and wayfinding system be developed for the University. Two years later, Yale launched the “Framework for Campus Planning” project and hired the architecture and urban design firm Cooper, Robertson & Partners to create a set of guidelines for campus development and to make recommendations for improving the systems that unify the campus, including signage, landscaping, lighting, and traffic flow. Their report, published in 2000,* provided new impetus to the campus sign project. Yale’s

*A supplement was published in July 2009.
In design and materials, the signs complement the variety of architectural styles on campus.
exterior sign system, developed in association with an advisory group that included representatives from all areas of the Yale community, was approved by the President and Officers in 2002. Sign installation began in the spring of 2003.

OBJECTIVES

A coherent and consistent sign system is essential to the creation of a visually unified urban campus. The standards and specifications detailed in this manual were established to satisfy several interrelated objectives.

• To provide effective, uniform building identification signs.
• To define and beautify the Yale campus by installing a limited number of uniformly designed, worded, and located signs, thus eliminating the graphic clutter created by the wide variety and condition of preexisting signs.
• To make key public destinations visible to newcomers and residents alike—major auditoriums and theaters, for example, as well as the Office of Undergraduate Admissions and the main entrances of the graduate and professional schools.
• To regularize design, materials, siting, and messages to improve wayfinding and to control long-term exterior signage design, production, and maintenance costs.
• To provide multiple resources that facilitate campus wayfinding, including prominently located pedestrian “you are here” map display cases with cross-references to department names and building addresses; a Web map with extensive search features (launched in January 2007); and interior building directories.

AESTHETICS

Developed by the graphic design firm Two Twelve Associates in collaboration with the Office of the University Printer and the Office of Facilities, the Yale sign system also reflects input from the Deans of the Schools of Art and Architecture and special consultation with Kent Bloomer, Professor (Adjunct) in the School of Architecture.

The simple white-on-Yale Blue and white-on-gray (Pantone 425) layouts, using the proprietary typeface (Yale Street) drawn for the University by the renowned Matthew Carter, Professor (Adjunct) in the School of Art, are designed to harmonize with the wide range of architectural styles and settings of the Yale campus.

The new signs accommodate a range of messages and installation configurations. Nonetheless, they form a visually coherent family of Yale identifiers, serving as informative and distinctive “captions” for the University’s buildings and grounds.
**VISUAL INDEX OF SIGN TYPES / BLUE SIGNS**

Signs not to scale

1. **Two-post**
   - 28 x 49-1/2" [porcelain pan]

2. **Building identifier—flag**
   - 28-1/2 x 23"
   - [porcelain pan]

3. **Building identifier—standard**
   - 20 x 18"

3a. **Subsidiary panel**
   - 3 x 18" or 4-1/2 x 18"
   - [phased out]

4. **Building identifier—small**
   - 11 x 9-7/8"

5. **Building identifier—entryway**
   - 11 x 9-7/8"

6. **Building identifier—historic**
   - 7-1/2 x 14-1/2"

7. **Street number—large**
   - 6 x 11-7/8"

8. **Street number—small**
   - 3-5/8 x 6"
/ GRAY SIGNS

Signs not to scale

A Special entrance
10 x 13-3/4"

B Regulatory
8 x 10"

C Smoking
3-7/8 x 10-1/2"
or 2-3/4 x 8"

D Instructional
4 x 6"

E Authorized
4 x 6" or 2-5/8 x 4"

F ADA instructional
11 x 9"

M Miscellaneous
BLUE SIGNS

Sign types 1–8 identify schools, major public destinations, and buildings. All but sign types 1 and 2 are wall-mounted.

See Itemization, pp. 24–35, for details.

1  Two-post
   For professional schools
   For major public destinations (use is limited; see p. 24)

2  Building identifier — flag
   For buildings set back from the street (use is limited; see p. 26)

3  Building identifier — standard
   For majority of buildings

3a  Subsidiary panel — standard or tall
    For identification of major public venues in Yale buildings
    (use is limited; see p. 30); panels attach to bottom of sign type 3

4  Building identifier — small
   For buildings where sign type 3 is too large

5  Building identifier — entryway
   For head of college houses and multiple-entry residence halls

6  Building identifier — historic
   For buildings of special historic interest on which sign type 3
   would be architecturally intrusive

7  Street number — large
   For address of a second major entrance to a building, usually
   on a different street than the primary entrance

8  Street number — small
   For address of a Yale-owned private residence
**GRAY SIGNS**

Sign types A–F and M are informational and regulatory signs, with standardized messages. These practical signs are designed to be legible but unobtrusive. All signs are wall-mounted.

See Itemization, pp. 36–43, for details.

---

**A** Special entrance

*For delivery entrances, etc. (e.g., college dining halls)*

**B** Regulatory

*For access ramps, etc.*

**C** Smoking

*For limited use near building entrances, intake ducts, etc.*

**D** Instructional

*For locked door access, etc.*

**E** Authorized

*For Yale access authorization, installed on all doors/gates*

**F** ADA instructional

*For accessible entrance directions when a building’s primary entrance is not accessible*

**M** Miscellaneous

*As necessary, the Office of the University Printer develops signs for special circumstances*
GUIDELINES FOR SIGN PLACEMENT

BLUE SIGNS

These guidelines describe optimal situations and some common alternatives, and they are not intended to be prescriptive. The actual placement of all exterior building signs must be determined based on a site visit, with a full-size mockup. For new construction, input from the architectural firm is welcome. All final decisions on placement are made by Yale’s sign committee.

For all sign types, adjustments are often necessary to accommodate architectural features and to avoid shrubbery, awkward alignment with mortar lines, etc. In particular, a building sign cannot be installed on a wall that is cluttered with call boxes, blue lights, etc. In the case of new construction, the Facilities project manager should meet with the University Printer early in the planning process to identify the appropriate location for the building-mounted sign and to ensure that that location is kept clear of all such equipment.

See also Itemization, pp. 24–35.

GRAY SIGNS

Gray signs are most often placed to the left of an entrance door. Sign types D and E are often installed on the door itself. The placement of regulatory signs (type B) and smoking signs (type C) varies according to the site; to avoid sign clutter, a single highly visible location is preferred to the installation of multiple signs. Installation height is determined on a case-by-case basis.

See also Itemization, pp. 36–43.

These single-sided signs (below) are placed near the main entrance to a school’s primary building, parallel to the street. If placement in an existing planting bed is not possible, landscaping with mulch and/or low plants is recommended to prevent damage from lawn-mowers and to discourage posting of flyers on blank verso of sign. Depending on the site, these signs can also be wall-mounted, with installation height determined on a case-by-case basis. See also pp. 24–25.
The ideal placement of wall-mounted building identifiers is immediately to the left or right of the main entrance, perpendicular to the primary pedestrian approach. Signs are most often centered between architectural elements or installed at a distance of half the width of the sign from a defining edge. As noted, a building sign cannot be installed on a wall that is cluttered with call boxes, blue lights, etc.

For sign type 3 (right: above), the standard installation height is 54 inches \(\text{AFF}\) (above finished floor): that is, 54 inches from the ground to the bottom edge of the sign. Alternative sites and installation heights are shown on p. 16. See also pp. 28–29.

For sign types 4 and 5 (right: below), the standard installation height is 63 inches \(\text{AFF}\): that is, 63 inches from the ground to the bottom edge of the sign. See also pp. 31–33.

For sign type 6 (not shown), installation height is determined on a case-by-case basis. See also p. 34.

The placement of street number signs is determined on a case-by-case basis. Sign type 7 is shown at right. See also p. 35.
**ALTERNATE SITES FOR SIGN TYPE 3**

A customized assessment of site conditions often dictates placement.

*Recessed glass entrance; sign placed on nearby wall.*

*Sign placed above projecting ledge of “base.”*

*Sign placed at street corner rather than at entrance.*

*Sign placed high to avoid matching coursing lines.*

*Sign placed at street rather than at recessed entrance.*

*Sign placed low to accommodate its size.*

**ALTERNATE HEIGHTS FOR SIGN TYPE 3**

If masonry coursing, stairs, or other architectural detailing prevents a standard hanging height, a customized assessment of the building’s facade will determine the appropriate installation height.
The Office of the University Printer (OUP) holds a set of engineer-approved construction documents for sign types 1–8 and A–M and is responsible for making the final production files for all new or replacement exterior signs.

For sign types 1–8, the OUP also directly oversees fabrication and installation—by a sole-source vendor—in consultation with the Facilities project manager and, if relevant, the architect. In the case of sign types 1 and 2, the sole-source vendor is responsible for contacting CBYD.

For sign types A–M for new construction projects or renovations, fabrication and installation of OUP-provided or OUP-approved sign files are overseen by the Facilities project manager.

*Note*  As specified at the start of this manual (see p. 7), all requests for exterior signs must be reviewed by the Yale sign committee. Under no circumstances may any exterior sign be independently fabricated and installed.
Porcelain signs marred by eggs and dirt (left) and what appear to be blows from a hammer or BB pellets (right). The former could be cleaned with a soft cloth and nonabrasive cleaner; the latter had to be replaced.
SIGN MAINTENANCE

BLUE SIGNS

Porcelain enamel was chosen for Yale’s freestanding and building-mounted blue signs because of its exceptional durability. The Yale Blue background color will not fade, there is no paint to peel or chip, and the nonporous surface is easy to clean.

Nevertheless, porcelain enamel is susceptible to damage from abrasion, which can scratch or dull the enamel, and from hammering, which can fracture the porcelain and expose the steel substrate. Porcelain enamel signs must therefore be removed from buildings that are undergoing exterior renovation or cleaning. The Facilities project manager should contact the Office of the University Printer (203.432.9579) to arrange for the removal before work is under way.

• To remove surface dirt and fingerprints, use a soft cloth and a glass spray cleaner like Windex.
• To remove gummy residue from stickers, use a soft cloth and a cleaner such as Goo Gone.
• To remove lime and mineral deposits (efflorescence), use a soft cloth and white vinegar or a dilute sulfamic acid solution. If this doesn’t work, please contact the Office of the University Printer (203.432.9579).
• NEVER use steel wool, plastic scrunchies, or abrasive cleaners like Comet to clean a porcelain enamel sign.

Note Buildings with all-glass edifices cannot accommodate porcelain signs. In these instances (e.g., Edward P. Evans Hall), a reverse-mounted vinyl and plexiglass sign is used. See also pp. 28–29.

GRAY SIGNS

Gray signs are painted aluminum with silkscreened or vinyl lettering, and vigorous cleaning could mar the paint surface. To remove surface dirt, wipe gently with a soft cloth and a mild soap and water solution. To remove gummy residue from stickers, soak the area with Rapid Remover, wipe gently, and repeat as necessary. Do not rub vigorously. NEVER use Goo Gone to clean a painted aluminum sign.
All requests for exterior signs must be reviewed by the Yale sign committee; see p. 7 for details.
The design and typesetting of all exterior signs is by the Office of the University Printer, which maintains templates for all sign types. Under no circumstances may signs be independently designed/typeset.

**TYPEFACES**

All signs use the Yale Street font, designed exclusively for the University’s exterior sign system by Matthew Carter and so named because it is intended to be legible from a distance—from the street. Both aligning and old-style numbers are supplied to accommodate the range of ways that numbers are used in signs. Glyphs (RA, ß, fi) are available for some letter combinations.

**TYPE SIZES**

Sizes vary according to sign type and length of message, with legibility a priority.

**LETTERSPACING**

Letterspacing has been built into the Yale Street font, but custom kerning is sometimes required, as determined by the University Printer.

**LINESPACING**

Linespacing varies according to sign type.

**LINE BREAKS**

Lines are broken as necessary by sense. Fewer lines are preferred, but the setting should not be too tight. No hyphenation is permitted.

**ABBREVIATIONS**

There are no word abbreviations in a building’s name: e.g., Laboratory (not Lab), Center (not Ctr). Words such as “Street” and “Avenue” are abbreviated (without punctuation) only when they appear in the address line of a major venue or building identifier (i.e., on sign types 1–4). See individual sign types for details.
Sign type 1 was developed to identify the primary home of each of Yale’s schools. Schools are limited to a single sign, which may be freestanding or wall-mounted depending on the location. * Sign type 1 has also been approved for six major public destinations: Battell Chapel, Undergraduate Admissions, University Police Department, Association of Yale Alumni, Human Resources, and Betts House.

**MESSAGE [schools]:** Yale University / [rule] / school name / school shield / address

**MESSAGE [major public destinations]:** Yale University / [rule] / name / address

*The Graduate School chose to forego a two-post sign in favor of installing two building identifiers (sign type 3) on HGS, one near the main entrance and one on the north end of the east facade, visible from Tower Parkway. The School of Music chose to identify the Adams Center for Musical Arts on their address line in lieu of their school address.*
Sign type 2 has been approved for a small number of buildings: the Yale Health Center (for which a flag sign better directs significant daytime and nighttime traffic to the entrance driveway) and a few buildings in the Upper Prospect area that are set back from the street. Use of this sign type is limited and requires the approval of the Office of the University Printer.

MESSAGE: Yale University / [rule] / building name / address

Regarding messages: Buildings are identified by name and/or address alone, not by the departments or offices within. To ensure legibility, the short form of a building’s official name—e.g., Loria Center rather than Jeffrey H. Loria Center for the History of Art—is the central message. If the building is not a named facility, its address serves as the central message, and words such as “Street” and “Avenue” are spelled out. Whenever those words appear in an address line, however, they are abbreviated, without punctuation (e.g., “St” and “Ave”).
Sign type 3 is by far the most prevalent type in the exterior sign system. Most buildings have a single sign near their primary entrance; a very small number have a second sign at another significant entrance.

**Message:** Yale University / [rule] / building name / address

Regarding messages: Buildings are identified by name and/or address alone, not by the departments or offices within. To ensure legibility, the short form of a building’s official name — e.g., Loria Center rather than Jeffrey H. Loria Center for the History of Art — is the central message. If the building is not a named facility, its address serves as the central message, and words such as “Street” and “Avenue” are spelled out. Whenever those words appear in an address line, however, they are abbreviated, without punctuation (e.g., “St” and “Ave”).
An important variation of sign type 3 is the identification of the residential colleges with their respective shields. Each college has a single sign near its primary entrance.

**MESSAGE:** Yale University / [rule] / college name / college shield / address

A second variation is used in the case of buildings with all-glass edifices that cannot accommodate the mounting hardware. The sign face is reverse-mounted vinyl with a beveled plexiglass backing piece.
BLUESIGN 3a
Subsidiary panel—standard or tall

Sign type 3a, a panel that can be attached to the bottom of sign type 3, identifies a major public venue within a Yale building.

This sign type has been phased out since the launch of the exterior sign system. Use requires approval of the Office of the University Printer.
Sign type 4 is used when sign type 3 is too large, most often because of architectural detailing.

**MESSAGE:** Yale University / [rule] / building name / address

Regarding messages: Buildings are identified by name and/or address alone, not by the departments or offices within. To ensure legibility, the short form of a building’s official name — e.g., Loria Center rather than Jeffrey H. Loria Center for the History of Art — is the central message. If the building is not a named facility, its address serves as the central message, and words such as “Street” and “Avenue” are spelled out. Whenever those words appear in an address line, however, they are abbreviated, without punctuation (e.g., “St” and “Ave”).
Sign type 5, which is identical in size to sign type 4, identifies head of college houses and residential hall entries. The design and messages vary accordingly.

MESSAGE [head of college house]: name of residential college / Head of College House / address

MESSAGE [residence hall entry]: name of residence hall / [rule] / entry letter [e.g., A]

Head of college houses with attached donor names are recognized as such. These are Biggs House (Saybrook College), Chanos House (Davenport), Leitner House (Pierson), and Swensen House (Berkeley). Unlike unnamed houses, the word “college” is retained in the first line.

MESSAGE [named house]: name of residential college / [house name] / address
Sign type 6 identifies buildings of special historic interest, in particular buildings on which sign type 3 might be deemed architecturally intrusive. It can also be used to identify major gateways that would not otherwise be signed; such a secondary use requires approval of the Office of the University Printer.

MESSAGE: building name
Sign types 7 and 8 identify a building by its street number alone. The larger sign is used for a second major entrance to a building when that entrance is on a different street than the primary entrance: for example, the 98 Wall Street entrance to Sprague Hall. The smaller sign is used on Yale-owned private residences: for example, the President’s House at 43 Hillhouse Avenue.

MESSAGE: street number
Sign type A identifies special-use building entrances, with independent addresses, that need to be labeled for deliveries, etc. In the address line, words such as “Street” and “Avenue” are abbreviated, without punctuation (e.g., “St” and “Ave”).

A 6 x 4 inch variant may be used in some residential contexts (e.g., head of college houses or graduate apartments).

**Sample Message:** Berkeley College / Dining Hall Deliveries / 205 Elm St
Sign type B is used for regulatory messages regarding handicapped access ramps, etc.

A 6 x 4 inch variant may be used when the standard size is too large, most often because of architectural detailing.

**SAMPLE MESSAGE:** Access Ramp / Bicycles or other objects obstructing ramp will be impounded
The Office of the President designated Yale tobacco free in March 2018, prohibiting the use of all tobacco products on the grounds of Central Campus, with other areas opting in. To promote the new policy, existing no smoking signs were replaced to include tobacco free messaging. “No smoking” messaging was retained at areas where air intake fans could draw smoke into a building, and at other strategic sites. Larger format signage was also developed for the greenscape around the Yale Health Center and the Athletic fields; use of this sign type is elsewhere prohibited.

In the interest of minimizing exterior signage, Sign type C is installed at a building’s entrance only if extensive problems with noncompliance have been reported. In most instances, internal messaging and interior signage by exits should be deployed instead.

In conjunction with Yale Environmental Health and Safety and the Tobacco Free project, no smoking messaging has also been developed for loading docks (see pp. 43).

SAMPLE MESSAGES
No Smoking / Yale University is tobacco free / Ready to quit? Tobaccofree.yale.edu
Yale University is / Tobacco Free / Ready to quit? Tobaccofree.yale.edu
Building Air Intake Area / No Smoking / within 25 feet of this sign
Sign type D most often provides instructional information on access to a Yale building.

**SAMPLE MESSAGES**
- Ring bell for entry
- Ring bell after hours
- This gate must be locked at all times
- Swipe your Yale ID to enter / All others, call for entry
- Please use automatic door only when physically necessary
- [directional arrow] / Please enter at 77 Prospect Street
- [directional arrow] / 82-90 Wall Street / Main entrance at rear
Sign type E, installed on all Yale doors and gates, signifies that access is restricted to Yale students, faculty, staff, and their guests. These signs function as the equivalent of “No Trespassing” signs.

A 2-5/8 x 4 inch variant may be used depending upon architectural constraints.

MESSAGE: [shield] / Authorized Yale personnel and their guests only
Sign type F, in accordance with the Americans with Disabilities Act, provides directional information to a building’s accessible entrance if the primary entrance is not handicapped-accessible. Per the Office of the Provost, all new instances of sign type F must include the active ADA symbol.

The Office of the University Printer may design custom variants when architectural constraints prevent use of the standard format.

**SAMPLE MESSAGE:** [ADA symbol + directional arrow] / building name / Accessible Entrance on Wall Street
As necessary, the Office of the University Printer develops gray signs for special circumstances: e.g., loading dock identification (13-3/4 x 10 inches); office identification for offices opening directly to the exterior of a building (6 x 9 inches); and various vehicular restrictions (10 x 14 inches, 12 x 17 inches, or 12 x 18 inches, depending on the site and message).

Signs about restricted parking can be rendered in white type on dark gray (Pantone 425), but they can also be rendered in Yale Blue type on light gray (Pantone 420). The latter conforms to the color scheme adopted for Yale parking lot signs (see pp. 48–49).
Signs that employ iconography for immediate visually clarity are typically 12 x 17 inches. These include vehicular restriction signs used at driveway entrances and no smoking signs for loading docks. This latter type was developed in conjunction with Yale Environmental Health and Safety and the Tobacco Free project, and it uses an orange border (Pantone 021) to call attention to hazardous conditions.
Itemization:
Additional Exterior Signs

All requests for exterior signs must be reviewed by the Yale sign committee. See p. 7 for details.
Freestanding, double-sided directional signs have been designed by the Office of the University Printer. Use is extremely limited; as of December 2013, only two signs have been approved and installed, for several Science Hill buildings whose porcelain building signs are not visible from Prospect Street.

The signs measure 38-1/2 x 28 inches. They are fabricated of aluminum, painted Yale Blue, with white vinyl lettering in the Yale Street font. The posts are Pantone 433.

Design and siting are by the Office of the University Printer, which also oversees fabrication and installation.
All files for new or replacement parking lot and Wall Street signs are prepared by the Office of the University Printer.

WALL STREET PARKING

In 2006 the Office of the University Printer developed new parking restriction signs for Wall Street, north of College Street. The signs are aluminum, painted Yale Blue on the recto and black on the verso. They are welded to steel poles, painted black, with a cap and modest base.

MESSAGES
Reserved Parking Only / on Wall Street / Permit Required / Unauthorized vehicles will be towed at owner’s expense
Head of Berkeley College / Reserved Parking / All other vehicles will be towed at owner’s expense
Library and Security Vehicles Only / Unauthorized vehicles will be towed at owner’s expense

Signs based on this model may also be installed in Yale parking lots. In this context, they are painted gray and should use the mounting treatment described below.

PARKING LOTS

In 2008 the Office of the University Printer developed new signs for Yale parking lots, and sizes and messages were approved by the Secretary [now Vice President for Global and Strategic Initiatives] of the University. Implementation has been gradual, as existing signs are damaged or parking lots are reconfigured.

The signs are constructed of a single piece of aluminum, painted Yale Blue on the recto and black on the verso. Measuring 20 x 18 inches, they have two sections, a lot identifier (8.625 x 18 in.) at the top and a regulatory message (12.325 x 18 in.) below. Mounting U-channel posts should be painted black; mounting hardware should be painted Yale Blue or Pantone 420 on front, black on back.

LOT IDENTIFIER: white vinyl letters [on Yale Blue]
MESSAGE: Yale University / Lot # / Address
REGULATORY PANEL: applied gray vinyl (Pantone 420) panel with cutout (i.e., Yale Blue) letters

SAMPLE MESSAGES

Restricted Lot [rule] / Assigned Permittees Only At All Times / Violators will be towed at owner’s expense / Call (203) 785-5555

Restricted Lot [rule] / Handicapped Parking Permit Required / Violators will be towed at owner’s expense / Call (203) 785-5555

Assigned Permittees Only / 7:30 am–4 pm, M–F / Public parking at all other times / Violators will be towed at owner’s expense / Call (203) 785-5555
Map cases are installed at seven locations around campus. There are six freestanding backlit cases: Trumbull Street (near northeast corner of Trumbull and Hillhouse); Cross Campus (near southwest corner of Harkness Hall); 149 Elm Street (outside the Visitor Center); Library Walk (near southwest corner of Branford College); York Street (near northwest corner of York and Crown); and Cedar Street (near pedestrian path to Harkness Memorial Hall). And there is one wall-mounted, unlit map case under the Phelps Gate arch.

The cases were designed, fabricated, and installed by Visual Graphic Systems, with glass-front cabinets fabricated by WSM (Water Solbach Metallbau GmbH).

The Yale maps were designed by Reineck & Reineck. They are updated once every two or three years as necessary. Updates are coordinated by the Office of the University Printer, which also oversees printing on an extremely durable, laminated, and UV-resistant paper.

Red “YOU ARE HERE” (with arrow) letters were printed for the University Printer by the Peabody Museum. They must be affixed to the maps in advance of installation.

After installation of the prototype case on Trumbull Street, it was determined that the “Yale University” letters at the top of the freestanding cases should be rendered in small caps rather than uc/lc letters. In case of damage or theft, the Office of the University Printer has a set of replacement letters.
MEMORIAL HALL / WOOLSEY HALL

The 12-foot-high freestanding poster display cases outside Memorial Hall were designed by Kent Bloomer, Professor (Adjunct) in the School of Art, and installed in 2007. They are fabricated of dark bronze and powder-coated stainless steel. The posters displayed therein measure 86-5/8 x 33 inches.

The School of Music keeps the keys to these cases and manages the posting schedule for organizations that publicize their performances therein. The Office of the University Printer has a duplicate set of keys.

The Office of the University Printer is available to assist with poster design.

Note To “hide” the magnets that hold the posters in position, the design of all Woolsey posters must include a 1-inch-wide black border.

UNIVERSITY THEATRE

In order to create a consistent family resemblance among Yale’s cultural venue display cases, the freestanding and wall-mounted poster display cases outside the University Theatre were also designed by Kent Bloomer and fabricated of dark bronze and powder-coated stainless steel. All are illuminated with low-voltage MR8 halogen down lights. Posters in the freestanding cases measure 72 x 36 inches; posters in the wall-mounted cases measure 48 x 24 inches.

The School of Drama keeps the keys to these cases and manages the design and posting schedule. The Office of the University Printer has a duplicate set of keys.
In 2012 Yale hired the graphic design firm Roll Barresi to develop a comprehensive program of exterior signs for the West Campus. The firm worked in close collaboration with the Facilities project manager, the Yale sign committee, and the West Campus administration. Numerous sign types were developed, and all were approved, with installation completed in spring 2013. Sign types include dimensional letters visible from I-95 and the rail corridor; highway directionals; gateway identifiers; on-campus vehicular directionals; building-mounted and freestanding building identifiers; Conference Center banners; parking signs; shuttle bus signs; and regulatory signs (e.g., speed limit).

Signs are aluminum—building identifiers are painted Yale Blue, directionals are painted Pantone 425—with white vinyl lettering.

Flags are 200 denier nylon in O.G. Blue, Electric Blue, and White.

Detailed fabrication specifications are available in a report prepared by Roll Barresi and kept in the Office of the University Printer. Subject to the approval of the Yale sign committee, files for new or replacement signs are prepared by the Office of the University Printer.
In 2008 Yale hired the graphic design firm Roll Barresi to develop a program of exterior signs for the Athletic fields. The firm worked in close collaboration with the Yale sign committee and the Athletics department. Eight sign types were developed, and five were approved and implemented in September 2010: freestanding district identifiers, building-mounted identifiers, freestanding building identifiers (when building-mounted identifier is not practical), map displays, and field identification flags. On hold are building-mounted panels for Yale Field and Yale Bowl, parking lot identifiers, and trailblazers to the Athletic fields.

Signs are aluminum, painted Yale Blue, with white vinyl lettering.

Flags are 200 denier nylon with polyester webbing, #2 grommets, and 4-stitch reinforced edges; colors are O.G. Blue, Bright Red, Emerald Green, Yellow Daffodil, and White.

Detailed fabrication specifications are available in a report prepared by Roll Barresi and kept in the Office of the University Printer. Subject to the approval of the Yale sign committee, files for new or replacement signs are prepared by the Office of the University Printer.
CONSTRUCTION

EXTERIOR

Major construction projects require an exterior sign, measuring 4 x 8 feet, painted Yale Blue with white vinyl letters. These signs are fabricated of wood and can be fence-mounted or freestanding (with wood posts).

MESSAGE: [Yale word mark] / A Yale University Capital Project / Project Name / [full-length rule] / This project includes: [bullet-point summary] / For more information about this project, please call 203-432-xxxx. / This project is being managed by the Yale University Office of Facilities Construction & Renovation. / Names and titles of President, Provost, VP for Facilities and Campus Development, University Planner, Architect, Construction Company

All files for exterior construction signs are prepared by the Office of the University Printer, with information provided by the Facilities project manager. The University Printer can recommend a fabricator.

INTERIOR

Interior construction projects of extended duration require an interior sign, printed in black on an 11 x 17 sheet of paper. In the interest of durability, it is strongly recommended that these signs be laminated.

MESSAGE: [Yale word mark] / A Yale University Facilities Project / Project Name / [full-length rule] / This project includes: [bullet-point summary] / This project is being managed by the Yale University Office of Facilities Construction & Renovation. / Names of Architect and Construction Company / For more information about this project, please call 203-432-xxxx.

All files for interior construction signs are prepared by the Office of the University Printer, with information provided by the Facilities project manager. It is recommended that they be printed and laminated at Yale Printing & Publishing Services.
This project includes:

• Comprehensive exterior envelope renovation
• Restoration of exterior, including windows, roofing, and masonry repointing
• New underground program for lecture hall and film studio
• New HVAC, plumbing, fire protection, and electrical system

For more information about this project, please call 203-331-4157.

This project is being managed by the Yale University Office of Facilities Construction & Renovation.

Yale-owned vehicles are “branded” with a Yale mark appropriate to their home department. Files for these marks are provided by the Office of the University Printer, which has established guidelines for size, color, and placement. Alternative configurations are not permitted.
Appendices
The room sign on the left includes a Grade 2 Braille translation, a window for a paper insert, and an ASI Infinity-series extruded notebar (at bottom), painted to match the sign. The room sign on the right does not include the notebar. In most cases, room signs for new construction projects should use the Mallory typeface (not pictured).
A: INTERIOR SIGNS

DESIGN & FABRICATION APPROVAL PROCESS

Interior signs also fall under the general purview of the Yale sign committee. Although
the Office of the University Printer is not directly responsible for the design or instal-
lation of these signs, typography and layout must be reviewed and approved by the
University Printer prior to fabrication.

The Office of Facilities can provide sample files for approved interior sign types. A
professional graphic designer or design firm must be engaged to create the fabrica-
tion files for interior signs in Adobe Illustrator or Adobe InDesign software. Signs
cannot be fabricated from CAD or Microsoft Office files.

Upon completion of each interior sign project, a complete set of the finished files
must be deposited with the Office of the University Printer to ensure that damaged
signs or signs with outdated messages can be expeditiously replaced.

GENERAL GUIDELINES

Room numbers and ADA requirements

All rooms and permanent spaces in Yale buildings must be identified by room number.
In accordance with the Americans with Disabilities Act (ADA), as well as state and
city codes, room numbers must be readable by the blind and sight-impaired. To that
end, all room signs at Yale should have 1/32-inch-high raised room numbers as well as
domed Grade 2 Braille translations of those numbers (separated from raised numbers
by a minimum of 3/8 inch).

Sizes

Room number signs are between 4 and 6 inches high, depending on budget and
building use. Large academic buildings with heavy student traffic most often use the
larger sizes. A 4 inch size is preferred for offices in former private residences that are
now part of the Yale campus.

Typeface

With few exceptions, interior signs for new construction or large-scale renovation
should use the Mallory Calb Book typeface. When a small number of signs need to be
replaced or integrated into an established set, existing conditions should be matched.
ADA requirements specify use of a sans serif roman face, as well as a minimum charac-
ter height of 5/8 inch and a maximum of 2 inches, based on an uppercase I.
Residential college interior signs include a plan of the college and student suite entrance identifiers with message boards.
Colors

As required by the ADA, there must be a 70% contrast between the color of the sign message and the color of the sign field. Project architects and designers may choose from a range of colors established by Yale in the 1980s: cool grays, dark metallic bronze, soft white, and Yale Blue (for Athletics facilities only) are the preferred colors. Many architects choose to match the sign field color to the wall color. In cases where the wall is dark stone or brick, the darker of the two sign colors may be used as the field color.

Materials and installation

Weather-resistant photopolymer signs on an aluminum backplate are attached to the walls with double-sided tape and silicone. ADA regulations require that the Braille be 40–60 inches AFF (above finished floor).

The majority of room signs at Yale also provide a window (2 inches high) into which a name or title can be inserted. They may also include an ASI Infinity-series extruded aluminum notebar along the bottom, attached to the backplate and painted the same color as the sign.

Residential college signs

College plan

A college plan, attached to the wall inside the main gate, is required. The plan can be silkscreened on wooden panels or, as at Jonathan Edwards College, printed on translucent material and illuminated from behind in a lockable metal and glass case. The JE plan, for example, is 36 inches square.

These plans are for wayfinding purposes, and as of 2017, spaces are to identified by generic names only to ensure equity to residential college donors. The plans are being replaced in phases to reflect this policy.

Identification of offices and apartments

For academic and administrative offices as well as deans’ and fellows’ apartments, signs are 6 x 6 inches with a 2 x 6 inch window for inserting laser-printed names and titles. Room numbers must be rendered in raised type with a Grade 2 Braille translation.
Identification of student suites and bedrooms

Student suite entrance signs, 8 x 15-1/2 inches, with raised suite numbers and ceramic note-leaving panels for messages, are installed outside the suite entrance. A shelf at the bottom is provided for dry marker pens.

Bedrooms within suites are identified by letter (A, B, C, etc.) on 3-inch square signs installed on or next to the bedroom door. These letters, which function as room numbers, must be rendered in raised type with a Grade 2 Braille translation.

Bathrooms

Residential college bathrooms require 6-inch square signs with appropriate pictogram, ADA symbol (if relevant), and room number.

In addition, silkscreened plaques, 9 x 11 inches, explaining the proper storage of toiletries within student bathrooms, are installed on the tile walls.

Stairs, floors, and other rooms

Stair and floor-level identification, including emergency exit information, and rooms with permanent functions—e.g., storage, mechanical, custodial—require 6-inch square signs. Room numbers must be rendered in raised type with a Braille translation.

Evacuation plans and fire safety signage

Signs holding fire evacuation plans, with primary and secondary escape paths shown in red and green, are installed in each student suite common room. The evacuation plans are prepared by the architects and the signage designer. The signs are 6-1/2 inches square with a 6-inch square window, open on one side for insertion of plans.

Old Campus evacuation plans, designed by the Office of the University Printer, are installed in each residence hall entryway. The plans are 11 x 17 inches.

Fire department valves and extinguisher cabinets are typically identified with vinyl letters, 7/8 inches high, in capital and lowercase (e.g., Fire Dept. Valve; Fire Extinguisher).

Courtyards

Entry doors within college courtyards are identified by letters (A, B, C, etc.) in 1/4 inch thick solid bronze, attached with studs. Note, however, that entry doors to the residence halls on Old Campus are identified with sign type 5 (see pp. 32–33).

Other entries from college courtyards (e.g., to the college offices or seminar rooms), are identified on solid bronze plaques with enamel infill, typically 6 inches square. Traditionally set in Garamond, new courtyard signs are set in the YaleNew typeface.
In the residential colleges, interior courtyard signs include bronze letters to identify entryways and bronze plaques to identify important public destinations within them.

Spelling Book and of An American
Dictionary of the English Language

PRESIDENT WILLIAM H. TAFT
LATER CHIEF JUSTICE OF
THE UNITED STATES YALE
1878, OCCUPIED A HOUSE
ON THIS SITE WHILE KENT
PROFESSOR OF LAW.
Commemorative plaques, which are historical and/or memorial in nature, are distinct from donor plaques and do not usually fall under the purview of the Office of Development. Many commemorative plaques at Yale identify the site of a former Yale building (e.g., Alumni Hall, on Old Campus) or the site of the former home of a Yale graduate or faculty member (e.g., Noah Webster, at the northeast corner of Silliman College). Others more explicitly honor the memory or achievements of members of the Yale community (e.g., the war memorial plaques in Memorial Hall).

**Eligibility and content**
Any proposal for a commemorative plaque must be approved by the Officers and should reflect a consensus that the plaque serves the interests of the Yale community and possibly the general public. Redundancy is discouraged, and the content of a proposed plaque may not substantially duplicate that of an existing plaque on Yale’s campus. The proposed language should focus on the event, site, or person being commemorated. In the event that a plaque is sponsored by an outside organization, sponsorship logos and advertisements are prohibited.

**Siting and design**
The siting of an approved plaque is determined by the Yale sign committee. In-ground installation is preferred, although installation on the wall of a building may be appropriate in some cases. In general, commemorative plaques may be no larger than two square feet and are to be fabricated of materials appropriate to the site. The design of such plaques is by the University Printer, or subject to his approval.

**Memorials**
In considering memorials to students, the University favors approaches that honor the student’s participation in the Yale community and continue that legacy for others. These would include such “living” memorials as scholarships, internships, or fellowships; gifts of books; or other offerings that contribute to academic life.

Although plaques and such monuments as benches, gates, or landscape elements have been installed in the past to memorialize students, this practice is not the current approach. Any departure from current practice requires a determination by the
Officers that a memorial installation serves the interests of the Yale community. The design and proposed siting of any memorial installation approved by the Officers will be overseen by Facilities Planning and Construction, and presented to the Officers for final approval.

Any situations that involve a request for a memorial installation must be brought to the Officers’ attention early in the discussion process, so that families and others do not make plans for installations that may not be approved.
